

INFUSION F&O DASHBOARD

Live-Market Paper Trading Validation Checklist - v5.0.0 Safety Cockpit

Purpose: use this checklist for the first full live-market validation day. The system is paper-first only. Do not treat any staged ticket as permission for live order execution.

1. Morning Setup - 08:45 to 09:10 IST

No.	Checklist item	Status/Notes
1	☐ Start Docker and confirm localhost:3000 opens without layout break.	
2	☐ Hard refresh browser using Ctrl + F5 so latest v5.0.0 files load.	
3	☐ Open Safety tab and confirm Paper-first lock is PASS.	
4	☐ Confirm Kill Switch is OFF. If unsure, click Clear Kill Switch.	
5	☐ Confirm Upstox token is valid and expiry time is visible.	
6	☐ Update dashboard Capital manually. Current baseline: Rs 50,000.	
7	☐ Update Daily Max Loss manually. Current baseline: Rs 2,500 or lower if market is volatile.	
8	☐ Set Risk/Trade. Recommended start: 1% only. Avoid 5% until paper data proves stability.	
9	☐ Confirm F&O universe count is loaded. Expected current count around 208 symbols.	
10	☐ Check NIFTY, BANKNIFTY, and market breadth strip is visible.	

2. Market Open Data Validation - 09:15 to 09:30 IST

No.	Checklist item	Status/Notes
1	☐ Safety tab Market Data gate should not remain BLOCKED during live market.	
2	☐ Footer should show Upstox streaming / data live, not disconnected.	
3	☐ Scanner should populate F&O rows with LTP, change %, sector, trend, MTF, strength, conviction.	
4	☐ Sort Conviction descending and Strength descending. Confirm top rows actually move up.	
5	☐ Select 3 different stocks and confirm inline row details update correctly.	
6	☐ Click TradingView button for one selected stock and confirm it opens correct symbol context.	
7	☐ Open Option Basis and confirm option chain moves from pending to contract-specific for CE/PE candidates.	
8	☐ If token expires or disconnects, use dashboard token dialog and recheck Safety tab after saving.	

3. Scanner Quality Checklist - Every Candidate

No.	Checklist item	Status/Notes
1	☐ Bias must be clear: BUY CE, BUY PE, HOLD, or AVOID. Do not trade unclear HOLD/AVOID rows.	
2	☐ MTF dots should align at least 4 out of 6 for directional confidence.	
3	☐ VWAP should agree with trade direction: CE above VWAP, PE below VWAP.	

No.	Checklist item	Status/Notes
4	☐ RVol should ideally be above 1.5x for momentum trades.	
5	☐ Avoid chase blockers: VWAP stretch, large candle, overextended RSI, wide spread.	
6	☐ Sector strength should support the trade. Avoid CE in weak sector or PE in strong sector unless reversal is explicit.	
7	☐ Entry, SL, T1/T2 must be visible and logical before logging.	
8	☐ Positive Above / Negative Below trigger must be near actionable price, not far away.	

4. Paper Trade Workflow

No.	Checklist item	Status/Notes
1	☐ Select candidate in F&O screener.	
2	☐ Read inline selected setup row and selected trade plan.	
3	☐ Open TradingView and visually confirm support/resistance, trend, candle, and volume.	
4	☐ Click Log Paper Trade only if setup is understandable and low-risk.	
5	☐ Open Journal tab and confirm captured entry, SL, T1/T2, option contract, news edge, and blockers.	
6	☐ Click Stage Ticket from Journal.	
7	☐ Open Execution tab and confirm ticket status: READY_TO_STAGE or BLOCKED.	
8	☐ If BLOCKED, do not override mentally. Write the blocker reason in your notes.	
9	☐ If READY_TO_STAGE, still keep it paper-only and track actual movement manually.	
10	☐ After outcome, mark Win, Loss, or Skip in Journal.	

INFUSION VALIDATION - RISK, NEWS, TELEGRAM, REVIEW

Use this page after the first 30 minutes and again after market close.

5. Risk Discipline Rules

Recommended starting rule: risk 1% per paper trade until at least 30-50 logged trades are reviewed. Your daily hard guard is Rs 2,500 on Rs 50,000 capital. If 2 losses happen early, stop new trades and switch to observation mode.

No.	Checklist item	Status/Notes
1	☐ No live orders from dashboard. Paper-first only.	
2	☐ No averaging down on option buying.	
3	☐ No trade when Safety verdict is BLOCKED.	
4	☐ No trade when option ticket is BLOCKED.	
5	☐ No trade if spread is too wide or lot-size/premium is missing.	
6	☐ No trade after daily loss cap is reached.	
7	☐ Maximum 2-3 loss-day attempts. More trades only if day remains green and setups are clean.	

6. News Edge Checklist

No.	Checklist item	Status/Notes
1	☐ For selected stock, open News tab and check stance: BULLISH, BEARISH, EVENT_RISK, NEUTRAL, NO_NEWS.	
2	☐ If EVENT_RISK appears, reduce size or skip unless price confirms strongly.	
3	☐ If news stance conflicts with scanner direction, downgrade confidence.	
4	☐ If sector-wide news exists, compare with sector strength map.	
5	☐ Record whether news helped, hurt, or was irrelevant in end-of-day notes.	

7. Telegram Alert Validation

No.	Checklist item	Status/Notes
1	☐ If alert comes, confirm it includes symbol, direction, entry, SL, T1/T2, R:R, option contract, blockers, and reason.	
2	☐ Compare Telegram alert with dashboard row at same time.	
3	☐ If Telegram says active signal but dashboard shows no active signal, note exact time and symbol.	
4	☐ If Telegram timeout appears, note whether option chain or bot delivery failed.	

8. End-of-Day Review - After 15:30 IST

No.	Checklist item	Status/Notes
1	☐ Count total candidates observed, journaled, staged, ready, blocked, wins, losses, skips.	
2	☐ Write top 3 winning pattern reasons.	

No.	Checklist item	Status/Notes
3	☐ Write top 3 losing/blocker reasons.	
4	☐ Check whether scanner top-ranked rows actually moved better than random rows.	
5	☐ Check if option tickets were realistic: premium, spread, lot size, and risk were usable.	
6	☐ Export or screenshot Journal, Execution, Safety, and top Scanner rows.	
7	☐ Send Codex the screenshots plus any confusing Telegram messages for next tuning.	

9. What To Report Back To Codex

Item	Write here
